

The Pit Lane Log

Make sense of it, then report it

The arcade's race console keeps a single log file for the whole day, and whoever wrote its export tool never bothered to make it consistent. Below is today's log, exactly as the console produced it.

pitlog.txt

```
CHECKIN,Mario,Standard Kart,100
CHECKIN,Bowser,Heavy Cruiser,100
LAP Mario 1 62.5
LAP Bowser 1 68.0
CHECKIN,Toad,Light Buggy,100
LAP Mario 2 61.8
LAP Bowser 2 67.2
LAP Toad 1 58.0
LAP Mario 3 63.0
LAP Bowser 3 66.9
LAP Toad 2 57.5
```

The task

Read `pitlog.txt` and figure out what each line represents and how the different lines are put together. Then write a program that reads it and produces a new file, `pitreport.txt`, with one line per driver showing their kart and their average lap time, formatted exactly like this:

```
Mario (Standard Kart): average lap 62.43 seconds
Bowser (Heavy Cruiser): average lap 67.37 seconds
Toad (Light Buggy): average lap 57.75 seconds
```

Both files belong in the `files` folder of an Eclipse project, the same convention as everything else this week.
