

Day 1 – Number Systems and Data Types

Theme: "how a machine stores a number is a place you can attack."

Warm-up: read the intercept

File: `intercept` has a secret message.

- Read the message. It contains your first flag and a hint.

Challenge B: the Corner Store

File: `vault` (source: `vault.c`).

- Run it: `./vault`
- Goal: reach 31337 credits to unlock the vault.
- But you are only allowed to purchase boxes.

Challenge C: under new management

File: `vault2` (source: `vault2.c`).

- Run it: `./vault2`
- Same goal, but now there are some input guards.
- Hint: Ghidra or radare2 probably can help here, particularly with seeing datatypes.
